## DETAILED ACTION

### *Allowable Subject Matter*

1. The following is an examiner's statement of reasons for allowance:

**Regarding amended claim 1 and claim 2**, the prior arts do not disclose a controller which, when the wireless communication device is operated as a slave device connected to the single master device and the slave device intends to communicate with another slave device, generates a packet where an address of a destination slave device received from the single master device through the transceiving unit is recorded in a destination address region, and transmits the packet through the transceiving unit to the destination slave device only through the single master device, and wherein the packet includes a destination address in a header region of the packet and a source address in a payload region of the pack.

**Regarding amended claim 3 and claim 4**, the prior arts do not disclose a controller which, when the wireless communication device is operated as a slave device connected to the master device and the slave device intends to communicate with another slave device, generates a packet where an address of a destination slave device received from the master device through the transceiving unit is recorded in a destination address region, wherein the destination region is in a header region of the packet, and transmits the packet through the transceiving unit to the destination slave device through the master device, and wherein the controller records a source address in a payload region of the packet.

**Regarding amended claim 5**, the prior arts do not disclose a controller which, when the wireless communication device is operated as a slave device connected to the master device and the slave device intends to communicate with another slave device, generates a packet where an

address of a destination slave device received from the master device through the transceiving unit is recorded in a destination address region, and transmits the packet through the transceiving unit to the destination slave device through the master device, wherein the packet includes a destination address in a header region of the packet and a source address in a payload region of the packet.

**Regarding amended claims 6 and 7**, the prior arts do not disclose a controller which, when the wireless communication device is operated as a master device connected to the at least one slave device, reads a packet received directly from said at least one slave device via the transceiving unit and transmits the packet directly to a corresponding slave device through the transceiving unit if there is an address of the corresponding slave device recorded in a destination address region of the packet, wherein the packet includes a destination address in a header region of the packet and a source address in a payload region of the packet.

**Regarding amended claim 8**, the prior arts do not disclose the controller recognizes the address recorded in a payload region of the packet as an address of the transmission slave device, wherein the packet includes a destination address in a header region of the packet and the source address in the payload region of the packet.

**Regarding amended claim 9, claims 10 and 12**, the prior arts do not disclose the slave device obtaining an address of the destination slave device from the master device, generating a packet including the address of the destination slave device as a destination address in a header region of the packet and the address of the slave device as a source address in a payload region of the packet, and transmitting the packet to the master device, and the master device reading the received packet, and transmitting the packet to the slave device of the destination address

**Regarding amended claim 11**, the prior arts do not disclose the slave device obtaining an address of the destination slave device from the master device, generating a packet including the address of the destination slave device as a destination address and the address of the slave device as a source address, wherein the packet includes the destination address in a header region of the packet and the source address in the payload region of the packet, and transmitting the packet to the master device, and the master device reading the received packet, and transmitting the packet to the slave device of the destination address, when the address recorded in a destination address region of the packet is the address of the slave device, wherein the slave device records its source address in the payload region of the packet.

**Regarding amended claim 13 and claim 14**, the prior arts do not disclose generating a packet including the address of the destination slave device as a destination address and the address of the slave device as a source address; and transmitting the packet to the master device so that the packet can be transmitted to the destination slave device through the master device according to the destination address recorded on the packet, wherein the packet includes the destination address in a header region of the packet and the source address in the payload region of the packet.

**Regarding amended claim 15 and claim 16**, the prior arts do not disclose generating a packet including the address of the destination slave device as a destination address in a header region of the packet and the address of the slave device as a source address in a payload region of the packet; and transmitting the packet to the master device so that the packet can be transmitted to the destination slave device through the master device according to the destination

address recorded on the packet, wherein the address of the transmission slave device is recorded in the payload region of the packet.

**Regarding amended claim 17 and claim 18**, the prior arts do not disclose the master device transmitting the packet directly to a second slave device of a destination address, when an address recorded in a destination address region of the packet is the address of the second slave device, wherein the packet includes the destination address in a header region of the packet and a source address in the payload region of the packet.

### ***Conclusion***

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
